

COMPUTERIZED ANESTHESIA DELIVERY SYSTEM IS A TECHNOLOGY THAT TAKES YOU BEYOND WHAT YOU CAN DO WITH

The computerized anesthesia delivery system is designed for unparalleled precision and patient's comfort.

Unlike the traditional technique that require anesthetizing an entire mandibular block Sta dynamic pressure sensing technology ensures proper technique to prevent needle deflection for faster onset, painless palatal injection with unparalleled predictability, precision and performance.

The system,s patent ergonomic hand piece produces easier, more controlled, fluid flow at greater volumes, enabling pain free anesthetic delivery regardless of required pressures.

The system anesthetizes multiple teeth from single, very comfortable newly defined palatal injection without numbing lips and face.

Its applications are in endodontic dentistry, periodontal dentistry, pediatric dentistry, aesthetic/restorative, prosthetic dentistry, dermatology and colorectal surgery.
